# CR104P Heavy-Duty, Nonilluminated Selector Switches <br> 600 Volts Maximum AC/DC 

10 Amperes Continuous
Suitable for use in NEMA Type 1,
3, 3R, 4, 4X, 12, and 13 Applications (1)

Knob-Operated
Selector Switch

Lever-Operated
Selector Switch

Units are supplied factory-assembled when ordered with contact blocks.

2-Position, Nonilluminated Knob-, Lever-, and Cylinder Lock-Operated Selector Switches

Notes: Catalog Number and price do not include nameplate. All nameplates must be ordered as a separate item from pages 9-33 and 9-34. Two keys included with each cylinder lock.
(1) When mounted in enclosures rated for those same applications. For some NEMA Type $4 X$ applications, protective caps will improve corrosion resistance.
(2) To order knob in a color other than black, replace the "B" in listed Catalog Numbers with E (Yellow), G (Green), L (Blue), or R (Red).
(3) To order black wing lever, replace " $A$ " in Catalog Number with " $B$ " before 91 or 92 contact digits. Example: the Catalog Number for a maintained, 1NO-1NC, operator with black wing lever is CR104PSM21B91.
(4) CH 501 keyed cylinder lock. Other listed cylinder locks are alike and use identical keys. Dissimilar locks are also available; contact nearest GE Industrial Systems-Electrical Distribution and Control Representative.

Extra Keys for Cylinder Lock Selector Switches

The GE push button offering includes a complete line of control units and stations in both full size push buttons ( 30 mm ) and in miniature size devices ( 22 mm ) which are designed to be used in numerous types of industrial applications.
The CR104P full-size, heavy-duty oiltight and watertight line is complete with a variety of accessories and enclosures.
Light Tower Status Indicating Lights provide information at a glance in industrial or commercial environments where you need to transmit and receive information across a distance. Modularity and versatility make them valuable in a broad range of applications.
GE's C-2000 ${ }^{\text {Tm }} 22 \mathrm{~mm}$ Global Push Buttons are designed to be applied in just about any application worldwide. C-2000 push buttons conform to all major world standards and are UL listed and CSA Certified. All devices except the double push button are rated for NEMA 1, 3, 3R, 3S, 4, 4X, 12, 13, and IP66 when mounted in a suitable enclosure. C-2000 push buttons are manufactured in an ISO 9000 facility, assuring you that these products comply with quality standards that are recognized worldwide. Pre-engraved nameplates are available in French, Spanish, Italian, German, and English. The C-2000 push button line is globally available under the same catalog numbers, packaging, and markings anywhere in the world.
An entire listing of CR2943 and CR2941 standard-duty push button control stations is available, suitable for NEMA Type 1, 4, 4 X , and 7 and 9 applications.

## CR104P Heavy-Duty Push Buttons <br> 600 Volts Maximum AC/DC

## 10 Amperes Continuous

## Technical Data, Dimensions

## Mounting

CR104P push buttons are designed for front mounting, with or without nameplates, in $113 / 64^{\prime \prime}$ diameter holes. Operators are provided with an octagonal ring, spacers, and gaskets to ensure an oiltight, uniform front protrusion.

## Drilling Plan <br> 

Dual Dimensions $\frac{\text { Inches }}{\text { Millimeters }}$ (For Estimating Only)

For dimensional information on other operators, contact nearest GE Industrial Systems-Electrical Distribution and Control Representative. Manufacturing tolerances apply to all untoleranced dimensions.

$X=$ Contact is closed.
$0=$ Contact is open.
NC $=$ Normally closed contact.

- = This position is nonexistent or is a "pass-through" position with no detent to stop or hold the knob there.
(1) Field wired.

In the catalog number of a 3-position nonilluminated selector switch the tifth figure after the "104" is the cam code number. Example: In CR104PSG32B91, the cam number is 2.
Note that an "open" position for an NO contact may not be a closed position for an NC contact at the same locaton and knob position. The cam may depress the contact plunger only half way in that position.
Changing cams on operators is not recommended: but, changing contact blocks on operators per above chart may meet a special need.
Example: To provide both $\times O \mathrm{O}$ and $\mathrm{O} \times \mathrm{O}$ operation, simply add a single-circuit NO contact block (L or R) to a CR104PSG32B01.
