

## TEMPORARY POWER DISTRIBUTION

### 91000 TEMPORARY POWER DISTRIBUTION

The Temporary Power Distribution Unit is designed to safely distribute temporary power on jobsites. It is appropriate for outdoor use (NEMA 3R) and designed to stand up to the toughest workplace conditions. The 120V/20A receptacles are protected by individual GFCIs with power on indicators. The outlets also provide open neutral and reverse phasing protection.

The system uses a 50A California Standard power inlet that then distributes power to several receptacles (see below). Over current protection is provided by a full complement of circuit breakers located under the easy-access side panel.

**APPROVAL:** cULus Certified

**RECEPTACLES:** 6 x 120V/20A 5-20R  
 1 x 250V/30A L6-30R  
 1 x 50A California Standard (for linking of units)

<b>91000</b>	Power distribution unit
<b>91006</b>	50' power cord for 91000. 6/3-8/1 SOW, 125-250V/50A
<b>91007</b>	100' power cord for 91000. 6/3-8/1 SOW, 125-250V/50A

We can do custom and higher power versions as well. Call us with your requirements.
