## DESCRIPTION

The Generac pre-wired switch is designed to operate with 8-17kW air-cooled generators. This transfer switch has an integrated load center for picking up the emergency circuits. It is especially useful where the main service is large and only a portion of the building load will be served by the generator. It is available with a built-in 10, 12 or 16-circuit load center to supply only those circuits that are essential during an emergency. All standard and load center transfer switches are CUL Listed and suitable for use in optional standby systems (NEC702).

## STANDARD FEATURES

All pre-wired switches are housed in a steel NEMA 1 enclosure, with electrostatically applied and baked powder paint. The Heavy Duty Generac Contactor is a UL recognized device, designed for years of service. The controller at the generator handles all the timing, sensing and exercising functions.

## CONTACTOR RATING

The transfer switch contactor is rated at 240 VAC and is available in a single phase configuration only.

**50-100 Amps**

**Functions**

All timing and sensing functions originate in the generator controller.

Utility voltage drop-out.....	<60%
Timer to generator start.....	10 second factory set, adjustable between 2-1500 seconds by a qualified dealer*
Engine warm up delay.....	5 seconds
Standby voltage sensor.....	60% for 5 seconds
Utility voltage pickup.....	>80%
Re-transfer time delay.....	15 seconds
Engine cool-down timer.....	60 seconds
Exerciser.....	12 minutes every 7 days

The transfer switch can be operated manually without power applied.

\*When used in conjunction with units utilizing Evolution™ controls
