

lockHARD bit

The LockHARD locks into place and never strips

The **lockHARD** bit has two strategically placed wings on the sides of its square bit end. This allows it to lock into place and makes sure you **NEVER** strip another screw. For decades they have been manufacturing this as a universal screw...

THE LOCKHARD BIT

THE COMMON SCREW
MANUFACTURED TODAY

....and seeing it as having the benefit of using either the square drive or the flat head screwdriver as a means of fastening. By combining the two, the surprising result is that the fastener and driver, become un-strippable.
