## Incandescent Lamp Changers <br> Rubber Covered Fingers with Garter Springs

## Features

- Rubber covered fingers with garter springs make changing a variety of lamp types simple.
- Hard-to-reach lamps are easily replaced without using ladders or platforms.
- A variety of styles and sizes is available to fit practically all commonly used lamps.
- Models for use with incandescent, mercury, metal halide, and sodium lamps.
- Garter spring grips lamps firmly.
- Lightweight for ease-of-use and convenience.
- Insulated to help protect against shock.
- Changes lamps up to $25^{\prime} / 7.6 \mathrm{~m}$ height (poles sold separately).

## Lamp Identification

A lamp designation consists of a letter indicating the shape and a figure to identify the approximate diameter in eighths of an inch. Lamps are measured through their greatest diameter. G-25 lamps are globe shaped with a $3-1 / 8$ "/79.5 mm diameter.

[^0]
[^0]:    (1) Lamp size, not wattage, determines proper changer. May not accommodate weight of greater Wattage lamps.
    (2) Jointed angle adapter for easy removal of horizontally or angle mounted lamps included. Use with small headed units only. (3) Not for use with angle adapter.
