When risk simply isn't an option...
Call a name you can trust. Call ECS.

ECS offers an incredibly diverse range of products with a unique focus on specialty products and hard to find items. What ever you need, we'll be happy to help. Call us today to experience the ECS difference.

Fire Alarm Cables

ECS carries a comprehensive selection of Fire Alarm and Signal Cables. These cables are typically used for interconnection of electrical devices within a security and fire protective signaling system. They have solid bare copper conductors, colour coded PVC insulation, and red PVC jackets. Fire alarm cables available are shielded, unshielded, armoured and unarmoured.

Fire Alarm Cables are also available as a dual rated Fire Alarm and LVT Cable.

LVT

ECS carries a wide selection of LVT. These cables are typically used for wiring low voltage heating and air conditioning controls, thermostats, door bells and annunciator systems, burglar alarms and intercom systems. They have solid bare copper conductors, colour coded PVC insulation, twisted conductors and brown or white PVC jacket. Multiple conductor counts are available.
