

Why have this?

The new Wiremold® WallSource™ Box. Multiple services – at one location.

At last – multiple services without the hassle of multiple wall boxes. The new Wiremold WallSource box provides interchangeable power and low voltage service entrances at a single point in the wall. So no matter how many wires and connections a workplace requires, your walls will look the same.

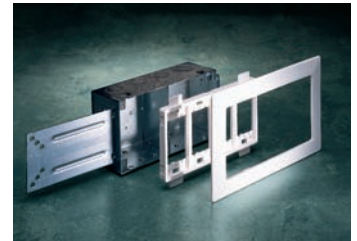

Ready for anything.

Today's workplaces are in a constant state of evolution. Offices change. Employees change. And technology, communications and power wiring requirements change with them. The WallSource multiple service box handles even the most drastic wiring modifications with ease – faceplates and connectivity inserts fit virtually any configuration and install in seconds. Electrical wiring and communications cabling is accessible separately through the individual covers. You're ready for change before it even happens.

Designed for easy use.

The WallSource multiple service box is a breeze to install – and because it provides a single point for all services in a work area, you save labor, time and money by eliminating the need for multiple drops. Adjustable mounting brackets offer the flexibility to quickly mount the box between 16" studs and at various wall thicknesses. Multiple knockouts on both the top and bottom of the box make access easy. Dividers simply slide in to separate power and low voltage wiring. And the WallSource four-gang multiple service box has the capacity to service an entire area through our large flexible perimeter systems.

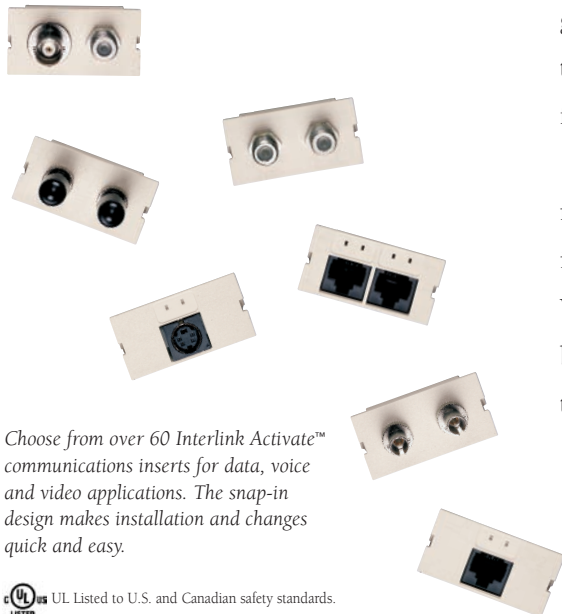

Behind the low-profile exterior of WallSource lies a rugged in-wall box with more than enough room for all your wiring needs.

The result: an in-wall wiring box that's ready for any wiring scenario – and can make it happen on a moment's notice. The new WallSource multiple service box. Another breakthrough wiring solution from Wiremold, the wire and cable management experts.

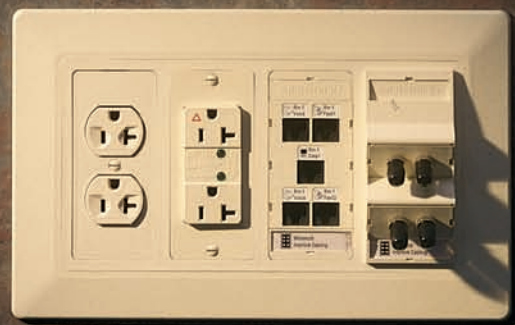

Interlink Activate™ inserts install in a "snap" to adapt to virtually any wiring configuration.

Workplaces today go through a lot of changes. With the WallSource multiple service box, your walls don't have to.

Choose from over 60 Interlink Activate™ communications inserts for data, voice and video applications. The snap-in design makes installation and changes quick and easy.

When you can have this.
