³ Life hours are derived from IESNA LM-80 testing report and projected per IESNA TM-21 extrapolations

This table shows dimmers that have been tested and have demonstrated proper operation under normal conditions. Each installation being unique, various factors such as load, common neutrals or other electrical products on the circuit can, in certain instancess, cause variance in system performance. Read and comply to the dimmer installation instructions. Consult dimming system manufacturer for additional support in operation. Some dimmers may require more than one product for stable operation. Stappor ecommends to use dimmers designed to work with LED products. Older dimmers designed for incandescent products may cause erratio operation.
