

BusGuard - Electrical Panelboard Filler - 5 pack

Electrical panel filler plate and bus
protection

PACK OF 5

BusGuard panel filler installs directly onto the busbar and won't fall out during cover removal. It helps reduce shock and arc flash risk by keeping the busbar covered. No more flimsy filler plates that fall out.

The secure fit and easy install means fewer gaps and less exposure inside the panel, helping electricians stay safer during installs and service work. The design looks more professional than traditional fillers while meeting required code standards. BusGuard improves safety, consistency, and overall confidence when working around energized equipment.

Features:

- ✓✓ ETL Approved
- ✓✓ 5 per pack
- ✓✓ **SAFE** – Reduces direct contact with energized components for a safer working environment during installs, inspections, and service work. Protect your panels and keep them up-to-code with these breaker blanks.
- ✓✓ **SECURE** – Holds firmly in place and prevents gaps, unlike typical breaker filler plates that often fall out and leave busbars exposed.
- ✓✓ **COMPATIBLE** – Works with the most common panel types, including THQL, BR, QP, HOM, and CHOM, with a QO-specific version also available for the right fit.
